

Business Introduction

For payment partners — service overview · revenue · marketing channels · roadmap

Service: <https://dealmai.com> | Markets: Japan & Thailand (live) / Korea (in preparation) | Issued: September 2026 | V1.2

 Document Purpose Summary

Item	Details
Document type	Business introduction for payment partnership / review (Confidential)
Service type	AI chatbot-based digital sales · booking · payment SaaS (not a physical open market)
Payment profile	Service-type online payments: packages, subscriptions, credits
Operating markets	Japan & Thailand live / Korea in preparation

Table of Contents

- 1. Business Overview (Service Description)
- 2. Revenue Structure
- 3. Marketing Channels & Suitable Industries
- 4. Future Roadmap

1. Business Overview (Service Description)

1.1 Overview

DealMai is an **AI Sales Agent SaaS**. Businesses connect an AI chatbot to their website or landing page to automate and support the sales flow—from customer inquiry and product guidance to **booking/package recommendations and online payment**.

Customers purchase packages (credit-based, one-time, or subscription). After payment is completed, an account and AI chatbot workspace are provisioned automatically. The platform supports both direct PG payments and partner sales channels (affiliate webhooks), with a multilingual UI in English, Thai, Japanese, and Korean.

- Core value: connect “consult → recommend → pay → provision account” into one digital sales pipeline
- Delivery model: cloud SaaS (web portal + admin console + AI chatbot workspace)
- Payment flow: direct PG checkout and partner webhook sales for order settlement and account provisioning
- Markets: **Japan & Thailand in operation / Korea in preparation**

Customer	→ AI chatbot consultation · product/booking guidance
Customer	→ Select package · online payment (PG / partner)
DealMai	→ Confirm order · auto-provision account/workspace · send guidance email
Customer	→ Portal login · use AI chatbot service · top-up / repurchase

1.2 Benefits for Merchants / Selling Businesses

- 24/7 AI chatbot expands consultation and sales throughput versus staffing cost
- Ideal for products that need explanation before payment (bookings, packages, credits)
- Automatic account/workspace issuance after payment reduces drop-off and manual work
- Multilingual support (JA/TH/KO/EN) helps expand customer touchpoints by country
- Unified admin console for packages, orders, partners, payment events, and branding
- Own customers and brand relationships—not an open-marketplace commission model
- Broadens reach to seniors, persons with disabilities, and digitally excluded users—**new demand segments**

1.3 Benefits for End Customers — Inclusive, Voice-First Experience

As populations age and smartphones become ubiquitous, demand for online shopping, booking, and payment grows. Yet **complex open-market and e-commerce UIs** remain a high barrier for seniors,

persons with disabilities, and digitally excluded users. DealMai is not click-heavy UI first; it is a **conversational service guided by speech and dialogue**, delivering a friendly, natural experience—similar to speaking with an agent on a traditional phone IVR/ARS line—available 24/7.

Core customer value

- **Speak & listen first:** guide products, bookings, and payments by voice/conversation instead of tiny text, dense menus, and multi-step carts
- **More natural than classic ARS:** not “press 1”; conversational Q&A like a live agent
- **24/7 with no queue:** continuous service nights and weekends (unlike staffed call-center wait times)
- **Patient with repetition:** re-explains kindly—well suited to seniors and first-time users
- **Smartphone-ready:** reduces app-install / signup friction; guides only the steps needed inside the dialogue
- **Digital inclusion:** voice guidance expands access for users who struggle with visual or touch interfaces

1.3.1 Service Examples (Conversational / Voice Guidance)

Customer segment	Pain with existing platforms	DealMai conversational example
Senior users	Small text, many buttons, confusing cart/options	“Book a salon appointment tomorrow morning.” → AI offers times & price → confirms and guides payment by voice
Users with visual/motor difficulties	Hard to navigate touch UI and multi-screen flows	Listen to package explanation → “I’ll take that.” → proceed with step-by-step audio guidance
Digital beginners / excluded users	Signup, terms, coupons, filters feel overwhelming	Ask only needed details in chat (date, party size, product) → skip unnecessary screens → complete booking/payment
Night / urgent inquiries	Call center closed, queues, next-day callback	Immediate 24/7 AI for booking changes, product Q&A, and payment guidance
Multilingual users	Limited local-language UI or staff	Same guidance and payment flow in Japanese, Thai, Korean, English, etc.

Customer	→ "I'd like an afternoon appointment this Saturday." (spoken / chat request)
AI	→ Offers available times, cost, and prep notes (voice/chat; repeats OK)
Customer	→ "2 PM please. I'll pay now."
AI	→ Confirms booking + guides secure payment (agent-like ARS feel)
System	→ Payment success → booking/entitlement confirmed → confirmation message

Compared with traditional ARS: classic ARS relies on keypad menus ("press 1"), while DealMai continues product explanation, booking, and payment guidance with **natural-language conversation closer to a live agent**. Customers do not need to "find the right button," and merchants can deliver a **friendly, always-on experience** without staffing a 24/7 call center.

1.4 Limitations & Risks (Disclosed for Payment Review)

Limitations disclosed candidly for payment-partner due diligence.

- Customer experience depends on AI answer quality and guardrail tuning
- Voice/conversation UX can be affected by device/environment (noise, microphone)
- PG / KYC / refund / chargeback requirements must be met per country
- Optimized for digital/service goods—not physical inventory logistics marketplaces
- Korea is still in preparation; early traffic/revenue skews to Japan & Thailand
- Partner-channel dependence may be affected by affiliate policy and settlement cycles

1.5 Differences from Open Markets & Typical E-commerce

Dimension	Open market / typical shop	DealMai
Seller model	Platform or listed merchants' catalogs	Brand-owned AI sales & payment experience
Core function	Search, cart, shipping	Consult, recommend, book/package guide, pay now
Usage mode	Touch / multi-step UI	Conversation & voice guidance (agent-like ARS feel)
Accessibility	High barrier for seniors / disabilities / digital exclusion	Proceed to booking & payment with spoken guidance
Product type	Physical multi-SKU goods	Digital subscriptions, credits, booking-style services
Customer touchpoint	Product pages	AI chatbot + web portal (24/7)
Fee model	Marketplace / ads / fulfillment fees	SaaS fees, package sales, credit revenue
Data ownership	Subject to platform policy	Merchant retains customers, orders, conversation context
Payment purpose	Goods purchase	Service entitlements, credits, deposits, etc.

Summary: DealMai is not a marketplace that “displays goods.” It is a **B2B2C digital sales infrastructure** where AI conducts sales consultation and connects payment to service activation — and an **inclusive channel** that opens services via voice and dialogue for customers who struggle with complex screens.

2. Revenue Structure

DealMai revenue comes primarily from **digital service / entitlement (package) sales** and **credits/subscriptions required to operate AI chatbots**—not physical inventory buy–sell margins.

2.1 Primary Revenue Sources

- **1** Package sales — customer payments for credit / one-time / subscription plans
- **2** Repeat purchase & credit top-ups — usage-based refill revenue
- **3** Partner-channel sales — settled revenue from affiliate / agency orders
- **4** (Future) add-ons, higher tiers, white-label / agency pricing

2.2 Payment & Settlement Perspective

Item	Description
Payment flow	Customer → PG (or partner payment) → DealMai order confirmation → automatic service/account activation
Methods & currencies	Vary by market (e.g., Thailand local PG; multi-currency via partners)
Event handling	Refunds, partial refunds, and failures logged via webhooks/callbacks
Key costs	PG fees, cloud/infra, AI/chatbot supply, support, marketing

2.3 Revenue Model Traits (for Payment Partners)

- High-frequency small-to-mid ticket digital payments (subscriptions & credit top-ups)
- No physical shipping → account/entitlement issues outweigh logistics claims
- Clear merchant fulfillment: service is delivered immediately after successful payment
- Same SaaS core with localized payments, language, and compliance for country expansion

3. Marketing Channels & Suitable Industries

DealMai currently operates and expands mainly in **Japan and Thailand**; **Korea is in preparation**. Marketing focuses less on broad open-market advertising and more on merchants/agencies in industries where **AI chatbot consultation → booking → payment** is a natural fit.

3.1 Channel Direction by Market

Market	Status	Primary channels / approach
Japan	Live / expanding	Local partners/agencies, SaaS-DX communities, industry demos, Japanese search/content, referrals
Thailand	Live / expanding	Local PG & partner integrations, agencies/resellers, industry workshops, SNS/messenger leads, Thai landing pages
Korea	In preparation	Merchant/payment/terms readiness, pilot industries, partnership discussions before formal launch

3.2 Industries Suited to AI Chatbot Booking & Payment Sales

These industries typically need consultation, offer standardized packages, and can collect deposits/passes/session packs online.

Industry	Why it fits	Payment / product examples
Beauty / clinics	Consult then choose treatment/course; many after-hours inquiries	Treatment packages, deposits, memberships
Education / courses	Curriculum guidance → enrollment conversion	Course passes, monthly plans, credits
Fitness / wellness	Repeated trial & membership consultation	Memberships, PT packages, passes
Travel / tours / activities	Schedule/option Q&A then book	Tour deposits, add-on fees
Lodging / small hotels	Standard FAQs on rooms, rates, options	Stay bookings, breakfast/options
Professional services	Automate initial consult + paid conversion	Consult vouchers, retainers, packages
IT / SaaS / digital subscriptions	Plan comparison & upgrades	Monthly/annual plans, credit top-ups
Events / tickets / workshops	Schedule, seats, early-bird guidance	Fees, early-bird tickets
Rental / lifestyle subscriptions	Explain plans/terms then pay	Monthly plans, deposits/setup fees
B2B agencies / resellers	Multi-account / white-label sales	Agency packages, bulk credits

3.3 Channel Operating Principles

- Prove consult→pay conversion with industry demo bots and case studies
- Scale via partners/agencies for local sales & support efficiency (JP/TH)
- Focus paid ads on proven industries and landings to manage CAC
- Before Korea launch: pilot industries + payment/KYC readiness
- Include **voice/conversational guidance** demos for seniors, disabilities, and digital inclusion use cases

4. Future Roadmap

4.1 Near Term — Infrastructure & Stability

- Migrate/harden infrastructure on controllable servers (availability, security, ops efficiency)
- Stabilize payment, webhook, settlement, and notification pipelines with stronger monitoring
- Improve JP/TH operating quality (multilingual, local payments, support)

4.2 Mid Term — Product & Channel Expansion

- Industry templates (beauty/education/booking, etc.) to shorten onboarding
- Strengthen agency/reseller programs to grow partner revenue share
- Enhance auto-renewal, reminders, and repurchase for booking/credit/subscription products
- Korea pilot → full launch after payment partners, terms, and support readiness

4.3 Long Term — Platformization

- Evolve the AI sales agent into a platform expandable by country, industry, and brand
- Strengthen white-label and enterprise features (roles, audit logs, SLA)
- Expand merchant ops tools for payments, settlement, and tax reporting
- Pair compliance/security certifications with larger merchant and payment partnerships

Summary for Payment Partners

DealMai is not a physical open marketplace; it is an **AI chatbot-based SaaS for digital sales, booking, and payment**. It is live in Japan and Thailand, with Korea in preparation. Transactions are mainly **service-type online payments** (packages, subscriptions, credits), with automatic account/service activation after successful payment. Reliable PG partnerships are a core growth priority for multi-country acceptance and customer trust.
